

When you buy a Tankbag you need to decide on the model (for example Engage) and the mounting method – one of the two Tankrings. So either the QUICK-LOCK EVO Tankring or the QUICK-LOCK Tankring.

Generally it should be noted that the Tankbag itself is always identical. The difference lies solely in the Tankring. The Tankrings differ as follows:

QUICK-LOCK EVO Tankring

(2nd generation)

- Adjustment: top down
- Color: black
- Lower building height than first generation
- Tankbag lockable to the bike via EVO Security Pin
- Not available as electric version

- Order Number ends with: .20000

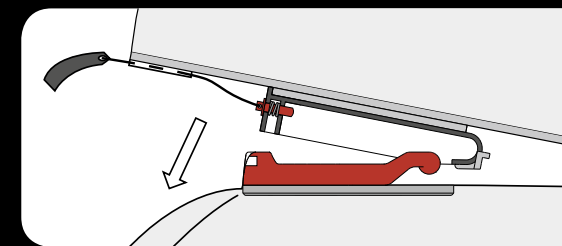

QUICK-LOCK Tankring

(1st generation)

- Adjustment: slide from back to front
- Color: silver
- Taller profile than the 2nd generation (building height)
- EVO Security Pin not available
- Also available as QUICK-LOCK Electric-Tankring

- Order Number ends with: .10000

Notice: both systems can't be combined!
